

Promoting radiation protection through inspecting and monitoring

54 Inspections conducted in 2024

10 Dental facilities
(71% of regulations compliant)

44 Imaging and hospital facilities (77% of
regulations compliant)

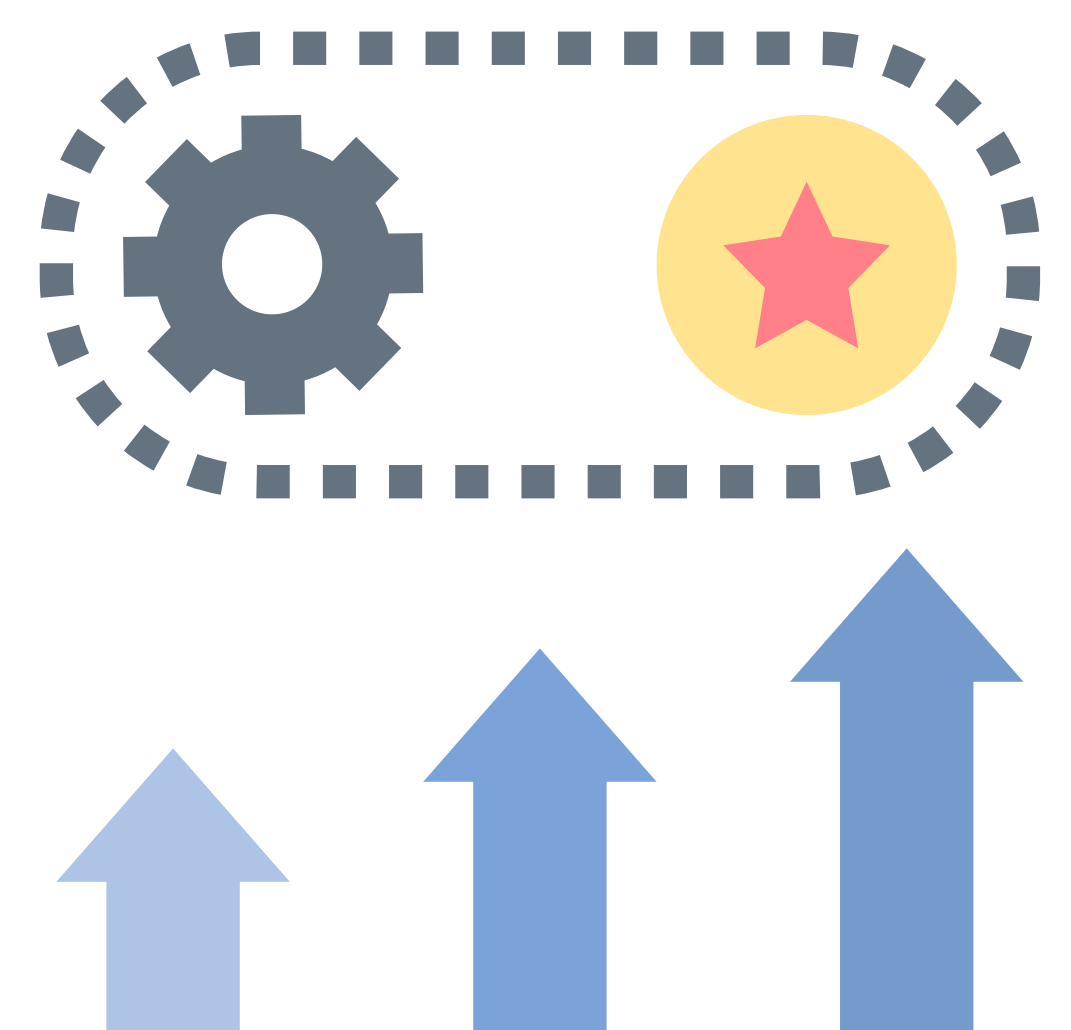

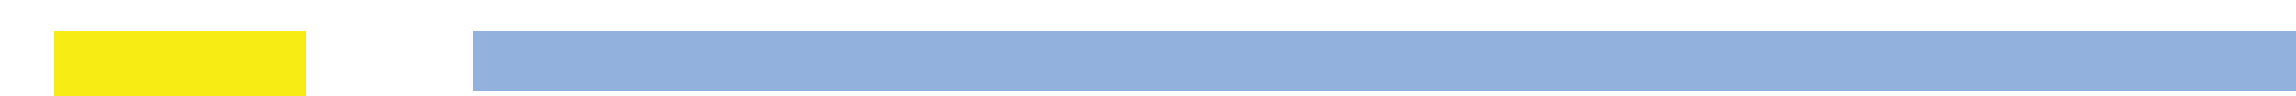

In 2024, we saw improvements:

5% increase in compliance with the regulations
from 2021-2023

15 facilities were re-inspected and showed
improvement in regulatory compliance.

Imaging and hospital facilities showed high levels of compliance with the following regulations:

Findings show:

Promoting radiation protection through engagement and awareness

1

Completed a radiation dose report with the EPA which showed doses received in healthcare facilities had slightly decreased.

2

Reviewed incidents of accidental and unintended exposures to radiation and shared lessons learned.

3

Published a scientific report on national radiation dose levels for fluoroscopy and fluoroscopically guided interventions.

4

Began preparations for the International Atomic Energy Agency's mission to assess Ireland's radiation safety standards.

5

Continued to engage with stakeholders, including Environmental Protection Agency, Heads of the European Radiological Protection Competent Authority and professional groups.
