

<b>Evidence gap identifier</b>	HCAI 2
<b>Brief title</b>	Cost-effectiveness of interventions to improve hand hygiene in high-adherence acute settings
<b>Report</b>	<u><a href="#">Infection Prevention and Control (IPC) National Clinical Guideline</a></u>
<b>Date identified</b>	08/07/2019
<b>Identified by</b>	CICER
<b>Supported by</b>	Systematic review
<b>Population</b>	Healthcare workers
<b>Intervention</b>	Any intervention intended to improve adherence with hand hygiene using soap and water or alcohol-based products
<b>Comparator</b>	No intervention or another intervention
<b>Outcome(s)</b>	Incremental cost-effectiveness ratios (ICERs) per healthcare acquired infection averted; QALY; hand hygiene improvements; HCAI rates
<b>Setting</b>	Hospital, nursing home, long-term care facility or community healthcare setting with high adherence to hand hygiene
<b>Study design</b>	Cost-effectiveness
<b>Further information</b>	Future research is required regarding the cost-effectiveness of interventions to improve hand hygiene in settings with high baseline adherence
