

Evidence gap identifier	SCS 4
Brief title	Minimum volume threshold for percutaneous coronary interventions
Report	<u>Evidence Review of Specialist Cardiac Services</u>
Date identified	13/03/2019
Identified by	CICER
Supported by	Scoping review
Population	Adults undergoing percutaneous coronary intervention (PCI)
Intervention	Interest: Annual percutaneous coronary intervention procedural volume modelled continuously
Comparator	Lower volumes (on a continuous scale)
Outcome(s)	Mortality; complications; post-procedure quality of life; healthcare utilisation
Setting	Specialist cardiac services
Study design	Observational
Further information	Further volume-outcome studies where volume is reported as a continuous outcome rather than based on arbitrary cut-off values are needed.
